ARYAN BHALKAR

Cloud DevOps & FinOps Engineer | AWS | Azure| Cloud Infrastructure| FinOps Certified Practitioner | FOCUS Certified |GreenOps

Sagar Housing Society, Vishwakarma Nagar, Ujalaiwadi, Kolhapur | +91 9561024984 | aryanbhalkar152@gmail.com

SUMMARY

Aspiring Cloud and FinOps Engineer with hands-on exposure to AWS and Microsoft Azure, focused on cloud infrastructure, compute, storage, networking, identity management, monitoring, automation, and cloud cost optimization. FOCUS Certified with practical knowledge of FinOps, GreenOps, cloud-native architecture, and secure infrastructure practices. Comfortable working with AWS services such as EC2, S3, Lambda, VPC, IAM, EFS, CloudWatch and Auto Scaling, along with Azure virtual machines, networking, load balancing, and monitoring services.

EDUCATION

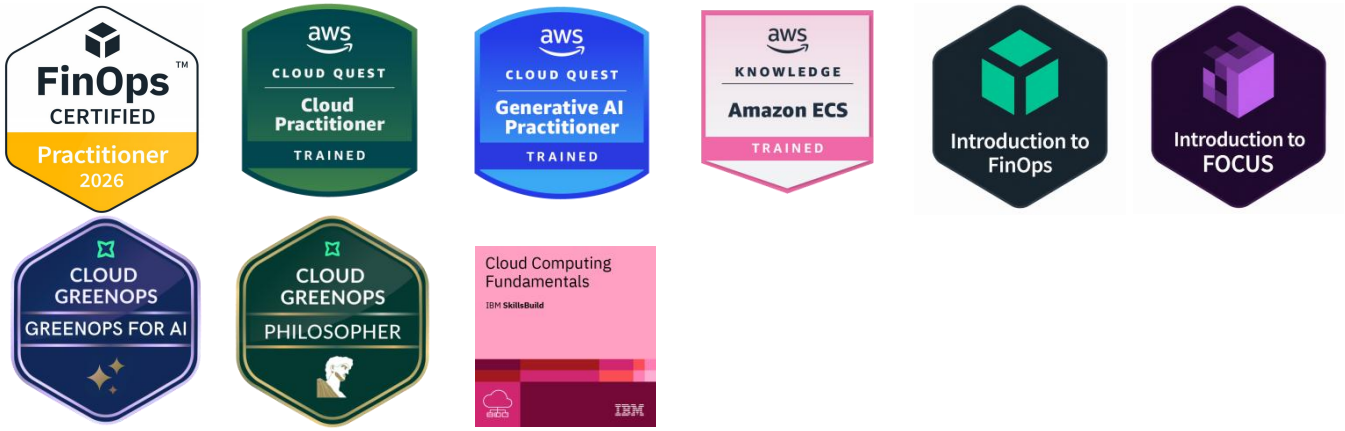

D. Y. Patil Agriculture and Technical University — **2023 - 2026**
Bachelor of Technology, Computer Science Engineering — *Kolhapur, Maharashtra*

Dr. D. Y. Patil Polytechnic, Kasaba Bawda, Kolhapur — **2020 - 2023**
Diploma in Computer Science, Computer Science — *Kolhapur, Maharashtra*

CORE COMPETENCIES

Cloud Infrastructure • Cloud DevOps & CI/CD • AWS Cloud Architecture • Azure Infrastructure • Cloud Cost Optimization (FinOps) • Serverless Computing • Containerization • Cloud Networking & Security • Infrastructure Automation • Cloud Monitoring • GreenOps

PROFESSIONAL TRAINING & BADGES

TECHNICAL SKILLS

Languages & Database: Python, SQL, MySQL

Cloud Platforms: Amazon Web Services (AWS), Microsoft Azure

AWS Services: EC2, S3, Lambda, VPC, IAM, RDS, CloudWatch, API Gateway EventBridge, DynamoDB, SNS, ECR, ECS Fargate, CodePipeline

Azure Services: Resource Groups, Virtual Machines, Virtual Network, Storage Accounts, Load Balancer, VM Scale Sets, Azure Monitor

DevOps & Tools: Git, GitHub, Docker, Jenkins, AWS CodePipeline, AWS CodeBuild, Amazon ECR

Networking & Security: VPC, Public/Private Subnets, Route Tables, Internet Gateway, Security Groups, Bastion Host, SSH, IAM

Serverless & Automation: AWS Lambda, Python Automation, EventBridge Scheduler, API Gateway, DynamoDB, SNS, CloudWatch

Cloud Practices: FinOps, Cloud Cost Optimization, GreenOps, Cloud Infrastructure, Cloud-Native Architecture

EXPERIENCE

Orelse Pvt. Ltd. *Sep. 2025 – Jul. 2026*
AI-ML Developer *Kolhapur, Maharashtra*

• Completed an 11-month AI-ML Developer job experience focused on automation workflows, cloud research, technical implementation support, and technology-driven business processes.

• Worked on AI-enabled workflow planning and automation initiatives, contributing to workflow analysis, documentation, and structuring for internal business use cases.

• Conducted AWS and Microsoft Azure service research across compute, storage, networking, monitoring, and cloud cost optimization areas.

• Researched and documented cloud technologies to support the evaluation of scalable, practical, and cost-conscious infrastructure approaches.

• Supported automation workflows for business processes, reducing repetitive manual activities through structured workflow design and automation.

• Contributed to lead research, data gathering, and digital outreach processes, supporting business development and technology-oriented operational activities.

• Used Git and GitHub for version control, project documentation, work management, and collaborative task tracking.

• Gained practical exposure to the relationship between cloud infrastructure, automation, AI-enabled workflows, and cost optimization, with a focus on scalable and cost-aware solutions.

Comptrance Technology **Jul. 2022 - Aug. 2022**
Web Developer Intern *Kolhapur, Maharashtra*

• Developed responsive web pages and website components using HTML5, CSS, and Bootstrap, with emphasis on clean structure and consistent presentation across different screen sizes.

• Worked on frontend development and UI implementation, focusing on page layout, visual aesthetics, navigation, and user-facing functionality.

• Integrated MySQL databases with web applications to support database-driven interactions and understand application data flow.

• Applied HTML5, CSS, and Bootstrap to create structured, responsive, and reusable web interface components.

• Gained practical understanding of how frontend interfaces interact with backend data, strengthening knowledge of database-driven web applications.

• Strengthened foundational skills in web development, responsive design, frontend technologies, database integration, and application debugging through hands-on development work.

PROJECTS

AWS Containerized CI/CD Pipeline using Docker & ECS Fargate **Jul. 2026 – Present**

AWS, Cloud Computing, DevOps, Docker, GitHub, CodePipeline, CodeBuild, ECR, ECS Fargate, ALB, CloudWatch

GitHub: github.com/aryanbhalkar/AWS-Containerized-CICD-Pipeline

• Built an end-to-end CI/CD pipeline for a Dockerized Flask application using GitHub, AWS CodePipeline, CodeBuild, Amazon ECR, and ECS Fargate.

• Automated testing, Docker image creation, image versioning, ECR publishing, and container deployment through a GitHub-triggered pipeline.

• Configured ECS Service, Application Load Balancer, Target Group health checks, IAM roles, and CloudWatch logging for reliable deployment and application monitoring.

• Implemented cloud-native DevOps practices for automated container delivery and continuous deployment on AWS.

Amazon RDS MySQL Access Using an EC2 Bastion Host (Jump Server) **Jul. 2026 - Present**

Cloud Computing, Amazon Web Services (AWS), VPC, EC2, RDS, SSH

GitHub: github.com/aryanbhalkar/AWS-RDS-MySQL-Bastion-host

- Securely deployed and accessed an Amazon RDS MySQL database hosted in a private subnet using an EC2 Bastion Host within a custom AWS VPC.
- Configured public and private subnets, an Internet Gateway, route tables, and security groups following AWS security best practices.
- Ensured the database was not publicly accessible and reachable only through a secure SSH connection to the Bastion Host.
- Gained hands-on experience with secure cloud networking and database deployment on AWS.

Serverless Employee Leave Management System on AWS **Jul. 2026 - Present**

AWS Lambda, Amazon API Gateway, DynamoDB, S3, SNS, CloudWatch, IAM

GitHub: github.com/aryanbhalkar/Employee-Leave-Management-System

- Built a cloud-native employee leave management system using AWS Lambda, API Gateway, DynamoDB, S3, SNS, CloudWatch, and IAM.
- Enabled employees to submit leave requests and upload supporting documents through secure REST APIs.
- Implemented automated email notifications and real-time leave status tracking.
- Provided managers with an approval and rejection workflow for leave requests.

AWS EC2 Auto Start-Stop Automation **Jun. 2026 - Present**

AWS Lambda (Python 3.14), Amazon EventBridge Scheduler, EC2

GitHub: github.com/aryanbhalkar/EC2-Auto-Start-Stop-Automation-using-AWS-Lambda

- Built a serverless automation workflow that starts and stops Amazon EC2 instances on predefined schedules.
- Used AWS Lambda (Python 3.14) and Amazon EventBridge Scheduler to automate instance control.
- Optimized cloud resource usage and reduced costs by eliminating unnecessary idle runtime.

CERTIFICATIONS

FinOps Foundation: Introduction to FinOps, Introduction to FOCUS, FinOps Certified Practitioner

AWS: Cloud Practitioner Essentials; Compute Services Overview; AWS for SAP – Cost Optimization Strategies; Amazon ECS Knowledge Badge; AWS Cloud Quest: Cloud Practitioner; Master Containerization with AWS (ECS, EKS, Fargate)

Microsoft Azure: Introduction to Cloud Infrastructure (Architecture & Concepts); AZ-104: Virtual Networks, Compute Resources, and Storage Management

Other: Fundamentals of Generative AI; Journey to Cloud: Envisioning Your Solution; Cloud Computing Fundamentals (IBM); Cloud GreenOps Philosopher; Cloud GreenOps for AI; Cloud Practitioner (The SmartBridge)

PROFESSIONAL DEVELOPMENT & TECHNICAL ACTIVITIES

· **Built and documented multiple AWS cloud projects** covering containerized CI/CD, serverless application development, secure VPC networking, database access, automation, and cloud cost optimization.
· **Implemented production-style AWS architectures** using public/private subnets, IAM roles, security groups, Application Load Balancer, ECS Fargate, RDS, Lambda, API Gateway, DynamoDB, and CloudWatch.
· **Developed automated cloud workflows** using AWS Lambda, EventBridge Scheduler, CI/CD services, and GitHub to reduce manual operational tasks and improve resource management.
· **Maintained technical documentation and project repositories on GitHub**, including architecture details, deployment configurations, implementation steps, and project outcomes.
· **Continuously expanded cloud expertise** through hands-on AWS and Azure labs, FinOps/FOCUS training, cloud architecture learning paths, and practical implementation.
